

Slim, simple and powerful 1U online rack UPS for small cabinets

Neuss, 31st August 2015

EN

With PowerWalker VFI 1000 R/1U a small rack cabinet can be powered. Taking just 1U (44mm) of valuable rack space it supplies the load with pure sine wave voltage in double conversion topology.

Reliable Power Protection

All mentioned product and company names are proprietary names or trademarks of the respective manufacturers

Despite being small it does not compromise on high performance. PowerWalker VFI 1000 R/1U features all benefits of professional online UPS. Default communication is supported by USB port, but intelligent slot for SNMP, Modbus or AS/400 is available. The UPS can be a part of an electrical installation with Emergency Power Off. Thanks to wide frequency and voltage input range it is compatible with generators.

Modern design housing offers only one button to control the UPS, but real functionality is supported by ViewPower software. Four strong batteries can hold 300W load for 23 minutes!

For more information visit our webpage www.powerwalker.com where you can find datasheet and manual for the models. If you have any questions, please contact our sales team.
